SUMMARY

Junior Data Analyst with one year of experience validating and reporting on business data in an Odoo ERP environment, and a Software Engineering degree. Skilled in Excel data tracking, KPI reporting and trend analysis, with projects covering ~10,000 order records, return tracking and multi-year trends. Experienced in gathering details from cross-functional teams, checking data accuracy and documenting results in structured reports. Completing the IBM Data Scientist track (DEPI).

TECHNICAL SKILLS

Data Analysis & ETL: Excel (Pivot Tables, Power Query, VLOOKUP), SQL (JOINs, GROUP BY, aggregations), SQL Server, data cleaning, data validation, KPI tracking, trend analysis

Visualization & Reporting: Power BI (DAX), Excel dashboards with slicers, Plotly, Matplotlib, PowerPoint

Python: Pandas, NumPy, BeautifulSoup, REST APIs and web scraping, Streamlit, Jupyter Notebook

Tools & Systems: Odoo ERP, Git, GitHub, Visual Studio Code

PROFESSIONAL EXPERIENCE

Developer (Odoo ERP) | CompuSharaf, Cairo, Egypt *Oct 2024 – Sep 2025*

- Validated data accuracy through testing and reporting, identified inconsistencies, and documented results in structured test reports.
- Gathered data and business requirements from cross-functional teams and translated them into technical solutions, from requirements through deployment and user acceptance testing.
- Analysed business and operational data in Odoo ERP to define reporting needs and system enhancements.

Network & Security Intern | ALMARASEM, Cairo, Egypt *Aug 2022*

- Monitored network systems and troubleshot connectivity issues, applying IP addressing, subnetting and routing fundamentals.

PROJECTS

Financial Analytics & Revenue Performance Dashboard *Sep 2026*

Python, Streamlit, Plotly, Pandas, BeautifulSoup, yfinance

- Built an automated pipeline with yfinance and BeautifulSoup that scrapes quarterly revenue from public financial filings and merges it with daily equity prices.
- Deployed an interactive dashboard on Streamlit Cloud with dual-axis Plotly charts and user controls to compare revenue and price trends over time.

Sales Performance Analytics Dashboard *Jul 2025*

Excel, Power Query, Pivot Tables, Data Model | Retail sales data

- Consolidated four source tables (~10,000 order lines, returns, sales reps, shipping costs) with Power Query into a data model, and derived COGS, discount value and delivery-duration fields.
- Built a KPI dashboard (Total and Net Sales, Returns, Discounts, COGS, Customers, Orders) using 20 pivot tables, 14 charts and slicers for city, sales rep, category and return status.
- Analysed 2014–2017 sales and quantity trends by year, category, region and city: revenue grew 51%, Technology was the top category (36% of sales), and California and New York City were the top state and city.

Bike Sales Customer Analysis Dashboard *2026*

Excel, Pivot Tables, Slicers

- Cleaned a 1,000-record customer dataset, engineered age brackets, and built an interactive dashboard (slicers for marital status, region, education) analysing purchases by age, income, gender and commute distance.
- Found that middle-aged customers bought at 55% versus 31–36% for other age groups, and that purchase rates fell from about 55% (under 1 mile) to about 30% (over 10 miles).

EDUCATION

B.Sc. Computer and Information Science, Software Engineering | GPA 3.31 (Very Good) *2020 – 2024*

Sadat Academy for Management Sciences, Cairo, Egypt

- **Graduation project:** Auto Aid, a Flutter/Firebase app matching users with nearby helpers via real-time location.

Data Scientist Track by IBM | Digital Egypt Pioneers Initiative (DEPI), MCIT *Jul 2026 – Jan 2027 (expected)*

- Pandas, NumPy, Matplotlib and API-based data extraction, plus the IBM Data Science course (Coursera).
